## TOOL LIST

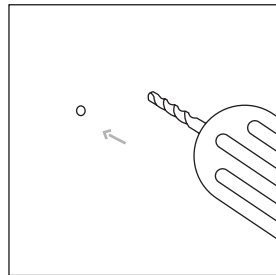

Electric screwdriver with TX 15 bit,  
Ø 8 mm drill.

1

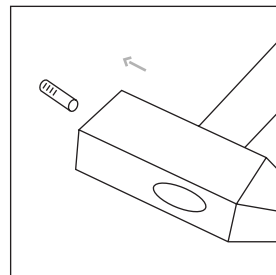

Mark your position for mounting.

2

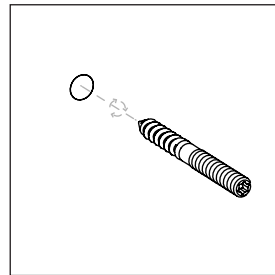

Drill a hole with an Ø 8mm drill approx.  
5 to 6 cm deep.

3

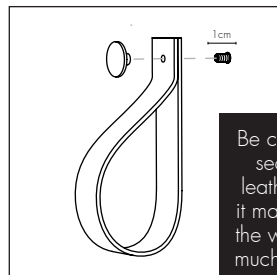

Place the rawlplug  
into the drilled hole.

4

Screw the long screw into the hole  
leaving 1 cm of the screw outside the  
wall (we recommend using an electric  
screwdriver).

5

Be careful when  
securing the  
leather strap as  
it may rub off on  
the wall with too  
much movement.

Remove the holding screw from the back of  
the knob. Thread the exposed 1 cm of the  
screw you set in the wall through the hole  
in the leather strap and screw into position.
